THIRD OXFORD MEETING ON FOOD SYSTEM IMPACT VALUATION

Monday 15 April 2019 and Tuesday 16 April 2019

Lady Margaret Hall

Norham Gardens, Oxford OX2 6QA, UK

We are pleased to announce that Professor Sir John Beddington of the Oxford Martin School will open the Third Oxford Meeting. Pushpam Kumar, Chief Environmental Economist UN Environment will be the keynote with Mario Abela, Director Redefining Value, WBCSD on application in the food sector of the Natural Capital Protocol, and recently released, Social & Human Capital Protocol. The Third Meeting is in collaboration with the FReSH Initiative of the World Business Council for Sustainable Development (WBCSD) and the Externalities Working Group of the Global Alliance for the Future of Food (GAFF).

Impact Valuation, also termed true cost accounting, is an emerging method aiming to measure and value the environmental, social and health externalities produced by businesses and society. Its implementation is gaining momentum and its application to food systems is challenging. The Meeting brings together academia, industry and civil society to foster the research and collaborations needed to further impact valuation for food systems.

Forward momentum and targeting opportunities are the purpose of the Third Meeting. On Monday (Day 1) of the Meeting the Natural Capital Finance Alliance will launch their report on Natural Capital Credit Risk Assessment in Agricultural Lending based on the Natural Capital Protocol. A registration option is available for the Launch only. There will be working sessions on four themes on Day 2, and attendees will participate in each theme.

Registration is now open [here](#). A draft programme is available [here](#). Reports of the previous meetings can be downloaded here: [First Oxford Meeting](#) [Second Oxford Meeting](#). For enquiries email [Roger Sykes](#), Food System Group Program Manager.

FOODSIVI

The Meeting is organised by the Food System Impact Valuation Initiative (FoodSIVI). FoodSIVI is an initiative between academia, industry and civil society to promote standardised and pre-competitive measurement and monetary valuation of environmental, social and health impacts of food systems. FoodSIVI's overall purpose is to work with other impact valuation and true cost accounting initiatives

to help food system actors enhance food systems so that they are more sustainable, resilient and restorative, and deliver better health outcomes. FoodSIVI aims to:

- Improve current impact valuation methodologies and operationalise the Natural and Social & Human Capital Protocols for food systems, and new methods for the valuation of health impacts. Promote the development of standardised and comparable data, and convergence of current methods towards a common agreed approach.
- Promote the inclusion of environmental, health and social data in emerging food information and technology systems and undertake research in the longer term on the utilisation of such systems for impact valuation.
- Initiate and promote uses of impact valuation for food system governance, regulation, public procurement, research, and consumer labelling, through a wide and diverse network.
